

STAINLESS STEEL MODELS

The toggle action units listed below are fabricated of corrosion resistant stainless steel. They are useful in any application where corrosion is a problem - plating operations, salt spray, etc. Another important use is in food handling operations. In these cases it is desirable to remove the vinyl handle before installations, thus permitting live steam or chemical sterilization. On those models which are normally furnished with a neoprene-tipped spindle, a stainless steel hex-head spindle, fully treaded, is supplied.

Model No.	EDP No.	Holding Capacity	Spindle No.	Flanged Washer	Handle Grip	Page Reference
